baiMobile **SMARTCARD** Reader Framework for **Android & iOS**

Smartcard based added security for your
Mobile Apps

ABOUT PRODUCT

baMobile Smartcard Reader Framework is a Software Development Kit (SDK) to make Android & iOS applications more secure by integrating smartcard-based security operations.

Smart cards are recognized as being one of the best ways to implement strong authentication, data encryption and also to manage private keys in secured way. Smartcard based mobile applications provide better integrity, safety & authenticity with combination of 'What you have' and 'What you know' which makes a perfect combination for data security.

baiMobile framework is an easy way to add smartcard-based security operations to your mobile apps.

PRODUCT FEATURES

- ✓ Secure access of company resources like network, applications, websites etc.
- ✓ PKCS#11 module for card-specific plug-ins
- ✓ Easy to integrate
- ✓ Abstracts the connection channel to the smartcard
